

The **ML6000S Shackle With Beads** is designed with a precision forged “*high performance*” stainless steel snap shackle. The shackle is a superior steel product with no need for replacement parts as the plunger pin is set captive for life. A forged snap shackle will deform long before breaking. It will not burst or break suddenly. This is a guarantee for safety.

The **beads** are manufactured of solid plastic designed for rugged use, with the orange colour providing greater visibility and ease of identification for releasing the plunger pin.

Specifications:

- Functional Load 1600 kgs
- Breaking Load 3850 kgs
- Stainless Steel Construction
- Beads are solid plastic
